Acknowledgments

The components of this instructional framework were developed by the following technical panel and curriculum development team members:
Thelma Atkins-Riley, Retired Professor of Nursing, Southside Virginia Community College
Lundy Beard, Practical Nursing Program Director, Northern Virginia Community College
Jane Best, Practical Nursing Instructor, Chesapeake Public Schools
Catherine Corp, Practical Nursing Instructor, Fairfax County Public Schools
Tammy Dean, Director of Practical Nursing, Prince William County Schools
Aileen Edwards Harris, Executive Director, Capital Area Health Education Center
Barbara Evard, Nursing Instructor, Virginia Beach City Public Schools
Wendy Falls, Practical Nursing Program Head, J. Sargeant Reynolds Community College
Aletheia Gaither, Registered Nurse, Southside Regional Medical Center Intensive Care Unit
Jeanne Maclin, Director of Health and Medical Sciences, Petersburg City Public Schools
Edith Mangrum, Retired Professor of Nursing, Southside Virginia Community College
Kathryn Mauch, Health and Medical Education Specialist, Henrico County Public Schools
Diane Mills, Nursing Instructor, Virginia Beach City Public Schools
Jeannette Pouncey, Retired Registered Nurse and Nurse Supervisor, Southside Regional Medical Center
Annette Reilly-Aurelio, Practical Nursing Program Coordinator, Chesterfield County Public Schools
Paula Saxby, Deputy Executive Director, Virginia Board of Nursing
Eunice Scott, Director of Nursing, Centura College of Richmond
Pamela “Gayle” Shultz, Director of Practical Nursing, Valley Career and Technical Center
Jacqueline Tucker, Practical Nursing Instructor, Petersburg City Public Schools
Michie Walton, Director/Instruction, Chesapeake Public Schools
Lena Whisenhunt, Director of Practical Nursing, Mountain Empire Community College
Mary Worrell, Retired Professor of Practical Nursing, Southside Virginia Community College

Tasks/competencies related to opioids were developed by:

David E. Brown, DC, Director, Virginia Department of Health Professions, Henrico
Linda S. Mintle, PhD, Chair, Division of Behavioral Health, College of Osteopathic Medicine, Liberty University, Lynchburg
A. Omar Abubaker, DMD, PhD, Professor and Chair, Department of Oral and Maxillofacial Surgery, Virginia Commonwealth University, Richmond

Correlations to the Virginia Standards of Learning were reviewed and completed by:

Vickie L. Inge, Mathematics Committee Member, Virginia Mathematics and Science Coalition
Anne F. Markwith, New Teacher Mentor, Gloucester County Public Schools
Cathy Nichols-Cocke, PhD, Fairfax High School, Fairfax County Public Schools
Caroline C. Wheeler, M.T., Secondary English
Course Description

Suggested Grade Level: 11 or 12
Prerequisites: 8357

In the second semester of Practical Nursing, instruction will focus on basic nursing skills, medical asepsis, human development across the life cycle, and an introduction to pharmacology. Students will also apply basic nursing skills in interactive settings.

NOTE: This course has specific state laws and regulations from a governing medical board or agency. Please contact the Virginia Department of Education, Office of Career and Technical Education prior to implementing this course. All inquiries may be sent to cte@doe.virginia.gov.

Task Essentials Table

<table>
<thead>

<tr>
<td>Examining the Key Factors of Drug Addiction</td>
<td></td>
</tr>
<tr>
<td>☀</td>
<td>Examine the science of addiction.</td>
</tr>
<tr>
<td>☀</td>
<td>Explain prevention and early intervention strategies.</td>
</tr>
<tr>
<td>☀</td>
<td>Identify addiction and its behavioral elements, as defined by the Diagnostic and Statistical Manual of Mental Disorders (DSM-5).</td>
</tr>
<tr>
<td>☀</td>
<td>Describe the treatment models of addiction therapy.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe the medication management antidote used to prevent fatal opioid overdoses.</td>
</tr>
<tr>
<td>Understanding Pain Management Protocols</td>
<td></td>
</tr>
<tr>
<td>☀</td>
<td>Explain the science of physiological and mental pain.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe the diagnostic tools used in developing pain management plans.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe pain treatment options available to various populations of patients.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe the effects of opioid dependency on the human body systems.</td>
</tr>
<tr>
<td>☀</td>
<td>Explain the mechanism and physical effects of opioids on the human body.</td>
</tr>
<tr>
<td>☀</td>
<td>Explain the use of opioids in practice settings, the role of opioids in pain management, and risk factors associated with the use of the medication.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe the withdrawal and tapering side effects of opioid use.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe storage and disposal options for opioids.</td>
</tr>
<tr>
<td>☀</td>
<td>Explain community resources for education about opioid use.</td>
</tr>
<tr>
<td>Working with Patients and Caregivers</td>
<td></td>
</tr>
<tr>
<td>☀</td>
<td>Describe key communication topics involving opioids for patients.</td>
</tr>
<tr>
<td>☀</td>
<td>Describe communication topics for caregivers and family members.</td>
</tr>

Legend: ☀Essential ☉Non-essential ☞Omitted
Curriculum Framework

Demonstrating Processes of Infection Prevention and Control

Task Number 39

Identify Occupational Safety and Health Administration (OSHA) regulations and guidelines.

Definition

Identification should include those procedures that apply to

- bloodborne pathogens
- immunizations (Hepatitis B)
- antibiotic-resistant organisms.

Process/Skill Questions

- What are exposure-control policies?
- What measures can you take to be protect yourself from pathogens?
- Who is eligible to receive Hepatitis B immunization?
- What are "superbugs"?
- Where are carbapenem-resistant Enterobacteriaceae (CRE) bacteria primarily found?
- What makes CRE so difficult to treat?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology
- Knowledge Test: Pathophysiology

Health Professions Events
Task Number 40

Demonstrate appropriate hand-hygiene techniques.

Definition

Demonstration should include elements of effective hand washing as recommended in the Centers for Disease Control and Prevention (CDC) standards and the use of hand sanitizers (hand hygiene).

See also “When & How to Wash Your Hands” (Centers for Disease Control and Prevention): [http://www.cdc.gov/handwashing/when-how-handwashing.html](http://www.cdc.gov/handwashing/when-how-handwashing.html)

Process/Skill Questions

- What are the essential elements of proper hand washing?
- Why are there standards for hand washing?
- How often should hand sanitizer be used between hand washings?
- For what situation(s) is it not appropriate to use hand sanitizer?
- What is the difference between medical and surgical asepsis?

HOSA Competitive Events (High School)

Health Professions Events

- Clinical Nursing

Task Number 41

Demonstrate how to clean instruments and supplies.

Definition

Demonstration should include
• use of personal protective equipment (PPE)
• proper storage of clean/unclean items
• procedures for cleaning and disinfecting.

Process/Skill Questions

• What are the differences between cleaning, disinfecting, and sterilization?
• Why is it important to use PPE while carrying out these procedures?
• How do you know whether or not equipment is properly sterilized?
• What are the procedures for sterilizing instruments?

HOSA Competitive Events (High School)

Health Science Events

  o Medical Spelling
  o Medical Terminology

Health Professions Events

  o Clinical Nursing

Task Number 42

Demonstrate isolation procedures to include personal protective equipment (PPE) as it applies to the Centers for Disease Control and Prevention (CDC) regulations on disease processes.

Definition

Demonstration should include

• putting on and taking off gown, mask, and gloves in the correct order to ensure that clean technique is used throughout the process and the healthcare worker does not contaminate himself/herself
• identifying CDC categories for specific PPE.

See also “Guidance on Personal Protective Equipment (PPE)” (Centers for Disease Control and Prevention): http://www.cdc.gov/vhf/ebola/healthcare-us/ppe/guidance.html
**Process/Skill Questions**

- What part of a gown is considered contaminated?
- What should be done when a mask becomes wet/damp?
- What are the steps in putting on a mask, a gown, and gloves?
- What situations/diseases require a nurse to use an N95 respirator mask?

**HOSA Competitive Events (High School)**

**Health Science Events**

- Medical Spelling
- Medical Terminology

**Health Professions Events**

- Clinical Nursing

---

**Task Number 43**

**Demonstrate double-bagging technique.**

**Definition**

Demonstration should include

- selection of appropriate bags
- correct sealing of bags
- appropriate disposal of bags.

**Process/Skill Questions**

- How should linens/trash be disposed of when a client is on contact precautions?
- How does double bagging help break the chain of infection?

**HOSA Competitive Events (High School)**

**Health Science Events**

- Medical Spelling
- Medical Terminology

**Health Professions Events**
Task Number 44

Demonstrate the handling and disposal of contaminated material.

Definition

Demonstration should include

- items that are disposed of versus cleaned
- precautions taken with sharps
- relation to standard precautions
- bloodborne pathogen precautions.

Process/Skill Questions

- Why is it important to properly dispose of contaminated material?
- What potential environmental concerns develop if medical wastes are disposed of improperly?

HOSA Competitive Events (High School)

Health Professions Events

- Clinical Nursing

Task Number 45

Demonstrate medical asepsis.

Definition

Demonstration should include

- evidence of understanding principles of asepsis
- use of CDC Standard Precautions.
Process/Skill Questions

- What are the general principles of asepsis and the rationale for each principle?
- What are the Standard Precautions, and how are they practiced?
- How can the basics of microbiology be summarized: families of microbes, the essential ingredients for microbial life, pathogenic verses nonpathogenic microbes, and the effects of pathogens on body functions?
- What is the sequence of events in the chain of infectious disease?
- How would Standard Precautions be used to interfere with the mode of transmission?
- How would methods of medical asepsis be applied to prevent airborne, droplet, contact, and neutropenic spread of communicable diseases?

HOSA Competitive Events (High School)

Health Professions Events

- Clinical Nursing

Task Number 46

Demonstrate surgical aseptic techniques.

Definition

Demonstration should include

- putting on and removing sterile gloves
- opening a sterile package
- establishing a sterile field
- pouring sterile liquids
- handling materials and tools to maintain sterile quality.

Process/Skill Questions

- What are the general principles of surgical aseptic techniques and the rationale behind each principle?
- What are the steps in donning sterile gloves and maintaining sterility?
- What are the steps in opening a sterile package and maintaining sterility?
- How are sterile forceps (both wet and dry) handled, and how is sterility maintained?
- What are the steps in pouring sterile liquids?
- How can the proper sterilization of instruments be determined?

HOSA Competitive Events (High School)
Health Professions Events
  o Clinical Nursing

Mastering Nursing Competencies/Skills in the Clinical Setting

Task Number 47

Demonstrate assessment procedures as outlined in the Board of Nursing Regulations in a laboratory and/or clinical setting.

Definition

Demonstration should include

- use of appropriate medical equipment and supplies
- assessment of all vital signs
- taking the client’s height, weight, and circumferences
- assistance with physician's examination.

See also “Curriculum: B.2” (Virginia Administrative Code): 18VAC90-27-90.

Process/Skill Questions

- What is the significance of vital signs?
- What are the normal ranges of the following vital signs for various age groups: temperature, pulse, respiration, and blood pressure?
- What steps should be taken to assess a client's temperature, pulse, respiration, and blood pressure?
- What steps should be taken to measure height, weight, and circumferences?
- What steps should be taken to assist a physician with a physical examination, including pre- and post-care of client and room, positioning and draping the client, and managing specimens?

HOSA Competitive Events (High School)
Task Number 48

Demonstrate measuring and recording intake and output in a laboratory and/or clinical setting.

Definition

Demonstration should include

- use of the metric system and the U.S. customary system (USCS), including conversion between systems
- ways to measure fluid intake
- ways to measure fluid output
- procedure for recording measurement according to agency documentation guidelines.

Process/Skill Questions

- How are intake and output documented?
- Why is the metric system used for measuring and documentation of intake and output?
- Why are accurate intake and output measurements essential?
- How would measuring output from a Foley catheter be described?
- What body fluids are considered to be output?
- What fluids are considered to be intake?
Task Number 49

Demonstrate alternate feeding methods and techniques in a laboratory and/or clinical setting.

Definition

Demonstration should include

- addressing client’s individual and special needs (e.g., tube feedings)
- providing client with assistive devices (e.g., plate guard, special utensils)
- positioning client, according to care plan
- preparing client to receive nutrition (e.g., hand washing, dentures, clothing protectors)
- alternating liquids and solids
- following appropriate guidelines for feeding the self-care and the dependent client
- recording alternate feeding methods and techniques, according to agency documentation guidelines.

Process/Skill Questions

- What precautions must be taken when administering a tube feeding?
- What is the procedure for assessing feeding tube location and patency prior to feeding?
- What variations in feeding need to be implemented for the client with difficulty swallowing?
- Why is it advisable to alternate liquids and solids?
- What actions can you take to increase calories for the client who is not eating?
- What is the purpose and the process of a calorie count?

HOSA Competitive Events (High School)

Health Science Events

- Medical Terminology

Health Professions Events

- Clinical Nursing
Task Number 50

Demonstrate appropriate body mechanics in a laboratory and/or clinical setting.

Definition

Demonstration should include

- elements of good body mechanics (e.g., base of support, proximity to load, minimal twisting, avoidance of repetitive motions, use of large muscles, and posture)
- techniques of standing, sitting, and moving for personal protection of the nurse
- techniques for moving, transferring, and lifting clients.

Process/Skill Questions

- What types of devices can help you transfer and lift clients?
- Why is good posture important for a nurse?
- What are the potential consequences of not using proper body mechanics?
- How should a nurse position herself to pick up a heavy object?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Health Professions Events

- Clinical Nursing

Teamwork Events

- HOSA Bowl

Task Number 51

Explain procedures and law regarding use of mobility equipment in a laboratory and/or clinical setting.
Definition

Explanation should include

- guidelines and client individualized plan of care for using transfer equipment (e.g., transfer belt, gait belt, lift, wheelchair, sliding board)
- ways to transfer clients with various physical disabilities (e.g., one-sided weakness, paralysis)
- ways to transfer clients in various activities of daily living (e.g., moving to and from bath/shower, toilet, car, chair)
- law that protects healthcare workers and clients when lifting clients (e.g., mechanical lifts).

See also “Department of Labor Reverses Mechanical Lift Age Restrictions” (Argentum): http://www.alfa.org/NewsBot.asp?MODE=VIEW&ID=1868

See also “Safe Patient Handling and Movement (SPHM)” (The National Institute for Occupational Safety and Health [NIOSH]): http://www.cdc.gov/niosh/topics/safepatient/

Process/Skill Questions

- What should be communicated to a client prior to and during a transfer?
- When would a sliding board be used to transfer a client?
- What strategies can be used to avoid a fall during a transfer?
- How would a client be lowered safely to the floor in an emergency situation?
- Why is it important to follow procedures exactly when transferring a client?
- What does the law state about using mechanical lifts?
- Should a nurse use a mechanical lift alone?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Health Professions Events

- Clinical Nursing

Task Number 52
Maintain a safe and controlled environment within laboratory and clinical environments.

Definition

Maintenance should include

- various client environments
- dignity and privacy of client
- physical contact with client, including body mechanics
- control of noise, climate, odors, lighting
- operation of various types of beds
- safety issues.

Process/Skill Questions

- What are considerations related to the dignity and privacy of the client?
- What factors place nurses and clients at risk for injury?
- How are restraints chosen, applied, and maintained?
- What methods are recommended to control noise in healthcare environments? Odors? Lighting?
- How can bed-making skills be adapted when making various types of beds, including closed, head-to-toe, crib, and therapeutic?
- What methods would be used in a home healthcare setting to ensure optimal emergency procedures, fire safety, sharps and contaminated waste disposal, and sanitation?
- To whom would you report safety issues?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Health Professions Events

- Clinical Nursing

Task Number 53
Identify prevention of, and appropriate response to, situations of domestic violence within laboratory and clinical environments.

Definition

Identification should include

- recognition of situations/events classified as domestic violence
- role of nurse as the mandated reporter
- role of community agencies that may prevent and/or respond to such acts.

Process/Skill Questions

- What situations are considered acts of domestic violence?
- What community agencies focus on prevention of domestic violence?
- What other professionals might serve in the role of mandated reporter?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology
- Knowledge Test: Medical Law and Ethics

Health Professions Events

- Clinical Nursing

Teamwork Events

- HOSA Bowl

Task Number 54

Perform procedures related to American Heart Association (AHA) first aid and emergency care in a laboratory and/or clinical setting.
Definition

Performance should include

- use of appropriate equipment and supplies
- assessment techniques
- procedures to control external bleeding
- first aid for choking victim and shock victim
- procedures to treat bone traumas
- procedures to treat: heat/cold exposure, poisoning, seizures, burns, bites

after completing AHA Basic Life Support health care provider and first aid training.

Process/Skill Questions

- How would you assess the situation and the client in an emergency through observation, inspection, and palpation?
- Why would you evaluate the situation for hidden dangers before entering the scene or touching the client?
- How would you perform CPR in a non-medical setting?
- How would you administer first aid to a conscious and an unconscious choking victim?
- What are the signs and symptoms of shock? What emergency procedures would you provide for a shock victim until help arrives?
- How would you perform emergency procedures to treat fractures, sprains, strains, and dislocations?
- How would you treat victims of heat/cold exposure, poisoning, seizures, and burns?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Teamwork Events

- HOSA Bowl

Emergency Preparedness Events

- CPR/First Aid

Task Number 55
Identify environmental safety precautions and procedures within laboratory and clinical environments.

Definition

Identification should include

- issues involving emergencies (e.g., fire, natural disasters, man-made disasters, hazardous waste mishaps, bomb threats, infant abduction)
- evacuation procedures
- hazardous and nonhazardous waste disposal
- roles of all people involved in emergency situations
- electrical safety standards.

Process/Skill Questions

- What is the role of a nurse in an emergency?
- What sequence of events should you implement when responding to a fire in a healthcare facility?
- What are areas with a high potential for fire?
- How would disposal of hazardous and nonhazardous waste materials be differentiated?
- How would the management of various emergencies and disasters be compared?
- What are the critical steps to take in the case of infant abduction?

HOSA Competitive Events (High School)

Health Professions Events

- Clinical Nursing

Task Number 56

Demonstrate range of motion in a laboratory and/or clinical setting.

Definition

Demonstration should include

- maintaining range of motion
- assisting with active range-of-motion exercises
• performing passive range-of-motion exercises.

Process/Skill Questions

• What circumstances require a client to have range-of-motion exercises?
• What techniques are used to perform active range-of-motion exercises?
• What techniques are used to perform passive range-of-motion exercises?
• What are examples of incorporating range-of-motion exercises into the client’s routine care?

HOSA Competitive Events (High School)

Health Professions Events

  o Clinical Nursing

Task Number 57

Explain the admission, transfer, and discharge procedures of a clinical setting.

Definition

Explanation should include the process of

• admitting a client
• transferring a client
• discharging a client.

Process/Skill Questions

• What are the steps in admission and discharge?
• What actions need to be taken when admitting a client?
• What actions need to be taken when discharging a client?
• How would you assist with transfer procedures, including intra-agency, inter-agency, client teaching, and documentation?
• What is the Emergency Medical Treatment and Active Labor Act, and how does it apply to client care?
• What is a nurse's role in the following:
  o Planning (coordination, collaboration)
  o Summary (What is a summary?)
  o Teaching
o Referral process
o Leaving against medical advice (AMA)

HOSA Competitive Events (High School)

Health Science Events

o Medical Terminology

Health Professions Events

o Clinical Nursing

Task Number 58

Perform procedures related to personal hygiene and activities of daily living (ADL).

Definition

Performance should include

- demonstrating various types of baths
- making an occupied and an unoccupied bed
- caring for client: dressing/undressing, oral hygiene, massage, haircare, nail care, shaving, shampooing, skin care, toileting.

Process/Skill Questions

- How would the different types of baths, such as cleansing, bed bath, medicated, and therapeutic, be determined? How would each type be matched with rationale, method of administration, and anticipated therapeutic responses?
- How would the following procedures be demonstrated:
  o Bed bath
  o Tub bath
  o Shower
  o Sitz bath
  o Whirlpool
  o Bed/fracture pan
- How do you make an occupied bed?
- How do you dress and undress the client, including the management of a closed and a running IV?
• How do you perform oral care of the conscious and unconscious client, such as the following:
  o Brushing teeth
  o Flossing
  o Caring for dentures
• How would you provide the following skin care?
  o Back rub
  o Care of bony prominences
  o Incontinence pads
  o Pull sheets
  o Draw sheets
  o Elimination hygiene
• What steps are taken to perform facial shaves? Hair and nail care, including bed shampoo?
• How do you administer personal care for the various forms of toileting?

HOSA Competitive Events (High School)

  Health Professions Events

  o Clinical Nursing

Understanding Fluid and Electrolyte Balance

Task Number 59

Explain the role of fluids in maintaining homeostasis.

Definition

Explanation should include

• definition of homeostasis
• the significance of intake and output
• fluid-volume imbalances (intracellular vs. extracellular)
• fluid retention and loss
• role of antidiuretic hormone (ADH), aldosterone, and renin-angiotensin.

Process/Skill Questions
• Of what significance is intake and output to homeostasis?
• What are the signs and symptoms of fluid imbalances: dehydration, hypovolemia, third-space shifting, and hypervolemia?
• What nursing interventions are indicated for each type of fluid-volume imbalance?
• For what situations would you expect to administer hypertonic, hypotonic and isotonic solutions to a client?
• How do ADH, aldosterone, and renin-angiotensin mechanisms maintain fluid balance?

**Task Number 60**

**Describe the major types of acid-base imbalances.**

**Definition**

Description should include

- normal pH
- inverse relationship between hydrogen ion concentration and pH level
- role of blood buffers, lungs, kidneys
- interpretation of arterial blood gas results
- causes and common assessment criteria of various imbalances
- interpretation of arterial blood gases.

**Process/Skill Questions**

- What is the normal pH of an adult's arterial blood?
- How do the relative concentrations of H+ ions and O4- ions affect pH?
- How do buffer systems, the lungs, and the kidney regulate acid-base balance?
• What mnemonic can assist you to interpret blood gases? (Respiratory = Opposite, Metabolic = Equal [ROME])
• What are the most common causes, signs, and symptoms of the following:
  o Respiratory acidosis
  o Respiratory alkalosis
  o Metabolic acidosis
  o Metabolic alkalosis
• What nursing interventions are appropriate for maintaining/preserving acid-base balances?

**Task Number 61**

**Describe the principles of intravenous (IV) therapy.**

**Definition**

Description should include

• types of IV therapy (e.g., blood transfusion, total parenteral nutrition [TPN], fluids)
• types of devices used for IV therapy
• types of IV solutions
• complications of IV therapy (e.g., phlebitis, infection, infiltration, embolism, hypervolemia).

**Process/Skill Questions**

• What are the purposes of IV therapy?
• What actions should you take if the client has a complication with IV therapy (e.g., phlebitis, infection, infiltration, embolism, hypovolemia)?
• What types of devices are used for IV therapy?
• How are *tonicity, solute, isotonic, hypotonic* and *hypertonic* defined?
• Which IV fluids are isotonic? Hypotonic? Hypertonic?
• How would an IV infusion be maintained (to include site assessment, cleaning, changing administration set, changing dressing, hanging a new bag of fluid)?
• What factors affect infusion rates?

**Applying Concepts Related to Wellness and Illness**

**Task Number 62**

**Explain physiological and psychosocial aspects of the illness and disease process.**

**Definition**

Explanation should include

- classifications of diseases
- terms related to disease
- the body's response to disease
- classifications of microorganisms
- psychosocial impact of diseases.
Process/Skill Questions

- How would the following classifications of diseases be explained: neoplastic, infectious, hereditary, traumatic, and congenital? What are examples of each?
- What terms are used to describe the course of a disease process, such as chronic, acute, exacerbation, remission, terminal?
- How is the body's response to disease described, including common signs and symptoms, the inflammatory process, and infection?
- What is the difference between community acquired and nosocomial illnesses?
- What are classifications of microorganisms? What is the relationship of each to the disease process?
- What are common psychosocial impacts of illness on the client and family?

**Apply the nursing process as it relates to the surgical patient/client.**

**Definition**

Application should include

- dealing with the fears and anxieties of the client
- identifying pre-existing health risk factors
- reducing surgical risk factors
- applying anti-embolic stockings
- performing pre-surgery procedures
- practicing intra-operative responsibilities
- practicing post-operative responsibilities.

**Process/Skill Questions**

- What are common nursing interventions that are used to address fears and anxieties of the client experiencing surgery?
- What are specific teaching topics to reduce or eliminate risk factors for the surgical client?
Why must anti-embolic stockings be used for the surgical client?
How would a nurse's role in the pre-, intra-, and post-operative care of the client be described?
How would you prepare a surgical checklist?
What are the different types of anesthesia and the nursing interventions for, and potential complications of, each?
What are the most common questions a nurse asks the client when being admitted for surgery?
What are major complications that may occur during the post-operative period and the medical and nursing prevention/management of each?

Task Number 67

Apply the nursing process to a client with neoplastic disease (cancer).

Definition

Application should include

  • incorporating knowledge of neoplastic disease (cancer)
  • dealing with client fears and anxieties related to diagnosis
  • reducing risk factors
  • assessing outcomes and interventions associated with surgical treatment
  • assessing outcomes, interventions, and evaluations associated with chemotherapy
  • assessing outcomes, interventions, and evaluations associated with radiation
  • assessing outcomes, interventions, and evaluations associated with new treatments, cryosurgery, and genome treatment.

Process/Skill Questions
What are cancer's warning signals?
What are the common screening tests for early detection of various cancers?
What is the difference between benign tumors and malignant tumors?
What is tumor staging?
What are the nursing interventions for the client undergoing surgery, radiation therapy, chemotherapy, immunotherapy, or bone marrow transplantation?
What nursing interventions could you use to provide support for the family and the client while hospitalized?
What nursing interventions could you use to provide emotional, physical, and spiritual support for the terminally ill cancer client?

Task Number 68

Apply the nursing process to a client with acquired immunodeficiency syndrome (AIDS).

Definition

Application should include

- knowledge of human immunodeficiency virus (HIV) and acquired immunodeficiency syndrome (AIDS) including pathophysiology, nursing assessment, outcomes, interventions, and evaluation of the client with HIV/AIDS
- development of plan of care
- application of nursing assessment, outcomes, interventions, and evaluation of pharmacological agents/therapies used for treatment
- application of nursing assessment, outcomes, interventions, and evaluation of dietary principles of educational guidelines.

Process/Skill Questions
- How is the pathophysiology of a depressed immune system explained?
- What is the difference between HIV and AIDS?
- How would you explain transmission of human immunodeficiency virus (HIV)? How does one prevent an HIV infection?
- What are the nursing interventions for the management of the client with HIV?
- What considerations would you take into account when developing a plan of care to meet the biological, psychological, social, dietary, and cultural needs of the client?
- What common pharmacological agents are used in the management of the client with HIV infection, and what are the side effects?

Understanding Principles of Growth and Development

Task Number 69

Identify global health influences on growth and development across the lifespan.

Definition

Identification should include

- major events that have occurred in society to promote growth and development
- governmental programs that influence growth and development.

Process/Skill Questions
• What major events have occurred in Western society that affect growth and development?
• How have these events impacted mortality and morbidity rates in the U.S.?
• What programs have been instituted by the U.S. government to promote healthy growth and development of people (e.g., vaccine, nutritional, educational)?

**HOSA Competitive Events (High School)**

*Teamwork Events*

  - HOSA Bowl

---

**Task Number 70**

**Examine principles of growth and development across the lifespan.**

**Definition**

Examination should include

- characteristics of specific life stages
- the development of cognitive, affective, and psychomotor patterns.

**Process/Skill Questions**

- How would you explain the following characteristics of growth and development:
  - Cephalocaudal
  - Proximodistal
  - Directional
  - Continuous
  - Maturation
  - Readiness
  - Development tasks
- What specific milestones does a person achieve at specific times of life?
- What are developmental stages, and how do they apply to growth and development?
- What are the different domains of development (e.g., cognitive, affective, psychomotor)?
- How are general patterns of growth and development explained, such as average life expectancy, average age of marriage, and midlife crisis?

**HOSA Competitive Events (High School)**
Task Number 71

Summarize theories of growth and development across the lifespan.

Definition

Summary should include

- classical conditioning
- cognitive learning
- operant conditioning
- theories of
  - Piaget
  - Kohlberg
  - Freud
  - Erickson
  - Sullivan
  - Havighurst
  - Maslow.

Process/Skill Questions

- What conclusions can be drawn from Piaget's Theory of Cognitive Development?
- How could an understanding of Kohlberg's Theory of Moral Development be demonstrated?
- How can Freud's Psychoanalytic/Psychosexual Theory of Personality Development be summarized?
- How can Erikson's stages of development be compared to Freud's?
• How can Sullivan's Interpersonal Theory of Personality Development be explained?
• How would nursing care based upon Maslow's Motivational Theory of Basic Needs (include all levels of the hierarchy) be prioritized?
• What inferences can be made regarding the learning theories of classical conditioning and cognitive learning?

Task Number 72

Describe the influences of heredity and environment on growth and development across the lifespan.

Definition

Description should include:

  • genetics
  • prenatal environmental factors
  • gender/identification
  • ethnic factors
  • ordinal position among siblings
  • emotional environment
  • socioeconomic environment
  • various family structures
  • community.

Process/Skill Questions
• How do genetics affect growth and development?
• What factors can affect the development of a child in utero (e.g., prenatal environment, health of mother, diet, stress, heredity)?
• How might an individual's gender influence his/her size and growth rate, mortality rate, expectations of parents, toys and play, and socialization?
• What ethnic factors might influence growth and development, including cultural beliefs, religious orientation, family structure, and healthcare beliefs?
• How might an ordinal position among siblings affect growth and development?
• What conclusions might be drawn about the environment’s effect on growth and development, including
  o emotional environment
  o variations in family structures, such as nuclear, foster, and extended family
  o socioeconomic environment
  o community factors, such as climate, location, housing, and availability of social services and medical care?

Explain growth and development of the infant.

Definition

Explanation should include

• developmental characteristics
• wellness/immunizations
• safety
• nutrition
• activity.

Process/Skill Questions

• What are the developmental characteristics of the normal infant?
• What strategies are recommended to new parents to foster psychosocial development based upon Erikson's theory?
• What methods are recommended for parents regarding the following:
  o Wellness/Immunizations Safety
    ▪ discipline
    ▪ prevention of Shaken Baby Syndrome
    ▪ positioning of infant crib rails
    ▪ toy safety
    ▪ child-proofing home
  o Nutrition
    ▪ breast milk versus formula
    ▪ introduction to solid foods
    ▪ food allergies
    ▪ teething
    ▪ GI concerns (e.g., colic, constipation)
  o Activity
    ▪ play
    ▪ sleep

Task Number 77

Explain growth and development of the adolescent.

Definition

Explanation should include

- physical development
- developmental characteristics
- developmental theories
- nursing concerns
- anticipatory guidance.

Process/Skill Questions

- What are the physical developmental characteristics of the normal adolescent?
- What developmental characteristics (identified by Piaget, Erickson, Kohlberg, Freud, and Sullivan) would one expect the adolescent to display?
- How would you differentiate between the developmental characteristics of early adolescence, middle adolescence, and late adolescence?
- What strategies could be recommended to the parents of the adolescent to foster psychosocial development?
- Why might the adolescent compare body image to his/her self-concept?
- What recommendations might be made for the parents of the adolescent related to the following:
  - Wellness (e.g., dental health, acne, reproductive system evaluations, sexually transmitted diseases [STDs], contraception, pregnancy, drugs, alcohol, smoking, socialization, peers)
  - Safety (e.g., motor vehicle, sports, weapons)
  - Nutrition
  - Guidance (e.g., sexuality conflicts, education, career planning, activities, exercise and rest, depression, work ethic, bullying, sexuality conflict, gender identification, social media)

**Explain growth and development of the young adult.**

**Definition**

Explanation should include

- characteristics of normal adult
- body image
- lifestyles
- impact of various influences (e.g., environment, genetic, and socioeconomic)
- nursing concerns
- major health concerns
- health promotion.

**Process/Skill Questions**

- What are the characteristics of the normal young adult?
- Why might the young adult compare body image to his/her self-concept?
- What impact might the lifestyle of young adults have on psychosocial adjustment? What might the impact of various influences (e.g., environment, genetic, socioeconomic) have on the young adult?
- What could be done to minimize the major health concerns of the young adult?
- What recommendations might be made to the young adult regarding the following:
  - Safety
  - Nutrition
  - Wellness
  - Family roles/planning
  - Maladaptive behaviors
  - Substance abuse
Task Number 79

Explain growth and development of the middle adult.

Definition

Explanation should include

- physical, mental, social concerns
- psychosocial impact of role transition
- various health concerns
- health promotion
- life events.

Process/Skill Questions

- What are some physical, mental, and social concerns of the middle adult?
- What common diseases are seen in this population?
- What recommendations might be made for the middle adult related to the following:
  - Health promotion needs, including nutritional requirements, rest, and exercise
  - Physical examination, screenings, and tests
  - Depression
  - Substance abuse
Sexual changes

• Why is it so important for the middle adult to plan for retirement?
• What impact might caring for children and elder parents have on the middle adult?

Task Number 80

Explain growth and development of the older adult.

Definition

Explanation should include

• variables of aging  
• theories of aging  
• various influences  
• general characteristics  
• physical characteristics  
• major adjustments  
• health promotion  
• safety and security.

Process/Skill Questions

• How can you differentiate among the variables of aging, including biological age, psychosocial age, and sociological age?
• How can the following factors influence aging:
  o Nutrition
• Environment
• Lifestyle
• Intoxicants
• Vocation
• General health
• Socioeconomic status
• Heredity

• What strategies might be recommended for the older adult to promote health?
• How can general characteristics common to the older adult be summarized? Physical characteristics?
• What are major adjustment periods of aging, such as retirement, death of a spouse, major illness, depression, and nursing home/assisted-living placement?
• What might be recommended for the older adult related to safety and security needs, such as access to community services, adequate lighting, nonslip surfaces, and elder abuse?
• What are the different categories within the “older adult” age group (e.g., older older adults)?

Introducing Concepts of Medication Administration

Task Number 87

Identify general principles of pharmacology.

Definition

Identification should include

- chemical, generic, and brand names
- familiarity with drug reference books
- legal standards
- laws and agencies
- ethical and legal responsibilities
- sources and derivatives of drugs
- forms of drugs available.

Process/Skill Questions

- What are the characteristics of chemical, generic, and brand names of specified drugs?
- What are the names of at least three drug reference books/online resources that provide easy access to information for a nurse? How are they used to obtain needed information?
- What is the title of the official drug reference that establishes legal standards for drugs?
• What laws and agencies regulate drug production, distribution, and use?
• What ethical and legal responsibilities govern a nurse's administration of medication?
• What are the sources of drugs? What is an example of a drug derived from each source.
• In what forms are drugs available?

- safety issues
- appropriate disposal of medication
- the role of the Food and Drug Administration (FDA)
- United States Pharmacopoeia (USP)-National Formulary
- Controlled Substances Act
- agency drug distribution systems
- Patient's Bill of Rights
- drug orders by the appropriate healthcare provider.

**Process/Skill Questions**

- What methods are used to distribute drugs in healthcare agencies, including stock and unit dose?
• What is the U.S. official drug reference book?
• What types of drugs are in each drug schedule?
• How does the Controlled Substances Act impact drug storage, as well as dispensing, administering, and documenting dosages?
• Which statement in the Patient's Bill of Rights relates to the administration of medication?
• What information must be included in a drug order by a healthcare provider?
• What are common abbreviations and symbols used in drug orders? How are they interpreted?
• What are the causes of common errors made in drug administration?
• Which are the “Do Not Use” abbreviations noted by the FDA?
• What steps should be followed when a medication error occurs?
• How are routes of drug administration in relation to rates of absorption, effectiveness, and safety of each compared and contrasted?
• What types of syringes are used for injections?
• What is the maximum amount of fluid a nurse can inject into the client for a subcutaneous, intradermal, and intramuscular injection?
• What criteria are used to select the correct needle size and length used for injections?
• What are the general rules for proper administration of drugs?

Calculate medication dosages.

Definition
Calculations should include

- use of metric, apothecary, and household systems of measurement
- use of basic math skills
- use of conversion equivalents
- use of ratio: proportion and formulas/dimensional analysis
- abbreviations used in drug orders to indicate time, frequency, and amount
- use of pediatric guidelines
- IV drip rates and flow rates.

Process/Skill Questions

- How do you determine the amount of medication to give a client?
- How would you set up a drug calculation problem?
- What formula would you use to calculate the rate of an intravenous solution when using a pump vs. no pump?
- What is the difference between a liter and a quart?
- What is the difference between a cubic centimeter and a milliliter?
- What are the units of measurement used in the metric, apothecary, and household systems of measurement?
- What are the common conversion equivalents to calculate doses when prescribed in one system of measurement and supplied in another?
- How do you convert from one system to another?
- How do you calculate an ordered dose of medication, using either a formula method, ratio: proportion, or dimensional analysis?
- What are the rules or guidelines for calculating pediatric dosages?
- How do you calculate IV drip rates? Flow rates?

---

**Describing the Opioid Crisis**
Task Number 91

Describe the history and current state of the opioid crisis in the United States.

Definition

Description should include

- the relationship between opioid prescribing and illicit opioid use to overall opioid overdose deaths
- the prevalence of co-occurring mental health disorders
- the shift in attitudes in the 1990s toward pain management and use of opioids, including the role of pharmaceutical marketing
- the stigma associated with addiction and the changing view of addiction from a moral failing to a chronic, relapsing disease
- statistics, trends, and demographics surrounding the crisis
- population health and other public health aspects of the crisis, including its effects on family and neonates, as well as overall health costs.

Process/Skill Questions

- How are opioids created?
- Can opioids be safely prescribed to patients taking psychotropic drugs?
- How does society stereotype individuals with a history of drug addiction?
- What are the current trends that have contributed to the nationwide opioid crisis?
- How has the opioid epidemic affected emergency rooms and the first responder system?

Task Number 92

Describe the history and current state of the opioid crisis in Virginia.

Definition

Description should include

- the relationship between opioid prescribing and illicit opioid use to overall opioid overdose deaths
- the prevalence of co-occurring mental health disorders
- the shift in attitudes in the 1990s toward pain management and use of opioids, including the role of pharmaceutical marketing
- the stigma associated with addiction and the changing view of addiction from a moral failing to a chronic, relapsing disease
- statistics, trends, and demographics surrounding the crisis
- population health and other public health aspects of the crisis, including its effects on family and neonates, as well as overall health costs
- the Virginia Department of Health’s Declaration of a Public Health Emergency on November 21, 2016
- proposed legislation to address the crisis in Virginia (i.e., House Bill 2161 and Senate Bill 1179, which require the secretary of health and human resources to convene a workgroup to establish educational guidelines for training healthcare providers in the safe prescribing and appropriate use of opioids)
- the development of curricula and educational standards regarding opioid addiction.

Resource: The Opioid Crisis Among Virginia Medicaid Beneficiaries

Process/Skill Questions

- What agencies participated in the governor’s task meeting on the opioid crisis?
- What educational organizations will be tasked with providing opioid training to their students?
- What is the benefit of educating future medical professionals about opioid addiction?
- What is the current attitude in society about opioid use and addiction?
- How is the local community affected by the opioid epidemic?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology
Task Number 93

Define the pharmacological components and common uses of opioids.

Definition

Definition should include

- plant-based opioids (e.g., opium from poppy seeds)
- names of legal and illegal opioids
- heroin
- names of the most common opioids
- fentanyl
- medical diagnoses and injuries associated with opioid prescriptions
- commonly used terms.

Resource: Prescription Pain Medications, National Institute on Drug Abuse for Teens

Process/Skill Questions

- For what illnesses are opioids commonly prescribed?
- What is the current medical protocol when opioids are prescribed?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology
- Knowledge Test: Pharmacology

Health Professions Events

- Clinical Nursing
Examining the Key Factors of Drug Addiction

Task Number 94

Examine the science of addiction.

Definition

Examination should include

- biopsychosocial aspects of addiction
- the role of endorphins and dopamine
- the role of religious beliefs
- behavioral aspects of addiction
- life cycle of addiction
- misuse of opioids.

Process/Skill Questions

- How will understanding the physiological absorption of opioids in the body provide a holistic assessment?
- What spiritual characteristics might be observed in the science of addiction?
- What are some genetic explanations for some family members being more prone to addiction?

Task Number 95

Explain prevention and early intervention strategies.

Definition

Explanation should include

- risk and protective factors in opioid addiction
- specific populations at risk of addiction
- motivational interviewing and other communication strategies
- naloxone co-prescribing
• roles of family and social institutions in prevention and early intervention.

Resources:

• [Prevention Tip Card](#), Office of the Attorney General of Virginia
• [Prescription Opioids: Even When Prescribed by a Doctor](#) (video), Centers for Disease Control and Prevention (CDC)

Process/Skill Questions

• What are the physiological characteristics of opioid addiction?
• What demographic is most affected by the opioid epidemic? What are some explanations for this?
• How can provision of naloxone and training in its use be sustained financially?
• What obligations do families and society as a whole have in preventing and providing early intervention related to drug addiction?

Task Number 96

Identify addiction and its behavioral elements, as defined by the Diagnostic and Statistical Manual of Mental Disorders (DSM-5).

Definition

Identification should include

• DSM-5 Criteria for Substance Use Disorders
• American Society of Addiction Medicine (ASAM) Criteria (i.e., The Six Dimensions of Multidimensional Assessment)
• CONTINUUM, The ASAM Criteria Decision Engine
• clinical and behavioral aspects of addiction
• practice-appropriate screening tools, including co-morbidity screening.

Process/Skill Questions

• What are DSM-5 and ASAM and what information do they provide to healthcare professionals?
• What are clinical and behavioral elements of addiction that should be recognized by healthcare professionals?
• Who is responsible for providing the necessary screening tools and training?
HOSA Competitive Events (High School)

Health Science Events

- Knowledge Test: Behavioral Health
- Knowledge Test: Medical Law and Ethics

Health Professions Events

- Clinical Nursing

Task Number 97

Describe the treatment models of addiction therapy.

Definition

Description should include

- a recognition that addiction is a chronic disease
- evidence-based treatment models for addiction in general and opioid addiction in particular
- medication-assisted treatment
- the continuum of care in opioid addiction treatment
- how and when to make a referral for treatment
- the roles in an interdisciplinary addiction team
- the role of peers in the treatment of addiction
- the difference between a drug culture and recovery culture
- the management of patients in recovery, including factors contributing to relapse.

Process/Skill Questions

- How many treatment models exist for addiction therapy? Why is one model better than the other?
- What are the advantages of evidence-based treatments and models?
- What medication-assisted treatment programs are available? Who provides them?

HOSA Competitive Events (High School)

Health Science Events

- Knowledge Test: Behavioral Health
- Knowledge Test: Medical Law and Ethics
Task Number 98

Describe the medication management antidote used to prevent fatal opioid overdoses.

Definition

Description should include

- availability and use of naloxone
- naloxone training (e.g., REVIVE!)
- naloxone training agencies
- monitoring of concurrent prescriptions.

Resources:

- Frequently Asked Questions about Naloxone, Virginia Department of Health
- How to prepare naloxone for administration, Virginia Department of Behavioral Health and Developmental Services

Process/Skill Questions

- What is naloxone?
- How much does naloxone cost with health insurance? How much does naloxone cost without health insurance?
- Who should receive naloxone training?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology
- Knowledge Test: Pharmacology
Task Number 99

Explain the science of physiological and mental pain.

Definition

Explanation should include

- definition of pain from the International Association for the Study of Pain (IASP)
- neurobiological basis of pain
- biopsychosocial model of pain
- types of pain (e.g., neuropathic)
- acute, sub-acute, and chronic pain, including pain generation
- spinal and brain modulation, behavioral adaptation and maladaptation, and the continuum from acute to chronic disabling pain
- the underlying science of pain relief.

Process/Skill Questions

- What is the IASP definition of pain?
- How can a medical professional get a patient to describe physiological pain?
- What assessment tools can be used to help patients describe physiological pain? How do tools differ for describing mental pain?
- How are pain and levels of pain categorized?

HOSA Competitive Events (High School)

Health Science Events

- Knowledge Test: Nutrition
- Knowledge Test: Transcultural Health Care

Teamwork Events

- Community Awareness
- Creative Problem Solving
- HOSA Bowl
Task Number 100

Describe the diagnostic tools used in developing pain management plans.

Definition

Description should include

- pain-related health history and examination
- understanding the role of family in supporting individuals in need of pain management
- practice-appropriate screening tools that include aspects such as mood and function
- the use and limitations of pain scales
- differential diagnosis of pain and its placement on the pain continuum.

Resource: Promoting Safer and More Effective Pain Management, CDC

Process/Skill Questions

- What are the Wong-Baker, LEGO, and Hospice assessment tools?
- How do pain assessment tools vary across the life span?
- When completing an assessment, is pain considered subjective or objective?

HOSA Competitive Events (High School)

Health Science Events

- Knowledge Test: Nutrition
- Knowledge Test: Transcultural Health Care

Teamwork Events

- Community Awareness
- Creative Problem Solving
- HOSA Bowl

Task Number 101

Describe pain treatment options available to various populations of patients.
**Definition**

Description should include

- special populations in pain management, such as palliative/end-of-life care patients, patients with cancer, pediatric patients, and geriatric populations
- non-pharmacologic treatment of pain, including active care and self-care, evidence- and non-evidence-based approaches, and multimodal pain management
- non-opioid pharmacologic management of pain
- the challenges in discussing the psychological aspects of pain and the role of the central nervous system
- adverse drug event prevention for all pain medications
- the roles in an interdisciplinary pain management team
- the significance of issues such as anxiety, depression, and sleep deprivation in pain management
- the placebo effect
- goals and expectations in the treatment of pain, based on diagnosis and pain continuum
- when to make a pain referral and to whom.

**Resources:**

- CDC Fact Sheet for Prescribing Opioids for Chronic Pain
- CDC Guidelines for Prescribing Opioids for Chronic Pain

**Process/Skill Questions**

- What pain management resources are available for special populations?
- What are alternative forms of pain management?
- What role does the mind play in pain management?

**HOSA Competitive Events (High School)**

**Health Science Events**

- Knowledge Test: Nutrition
- Knowledge Test: Transcultural Health Care

**Teamwork Events**

- Community Awareness
- Creative Problem Solving
- HOSA Bowl
Task Number 102

Describe the effects of opioid dependency on the human body systems.

Definition

Description should include the short- and long-term effects of opioids on the following:

- Nervous system
- Respiratory system
- Circulatory system
- Digestive system
- Skeletal system

Resource: Drugs and Your Body, Scholastic

Process/Skill Questions

- How does the misuse of opioids affect nutrition and weight loss?
- How might opioid misuse be evident in a person’s vital signs?
- How do opioids affect the brain as the control center for homeostasis?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Teamwork Events

- HOSA Bowl

Task Number 103

Explain the mechanism and physical effects of opioids on the human body.

Definition
Explanation should include the following:

- Mechanism of action and metabolism of opioids
- Development of tolerance, dependence, and addiction
- Health consequences of drug misuse
  - HIV, hepatitis, and other infectious diseases
  - Cancer
  - Cardiovascular effects
  - Respiratory effects
  - Gastrointestinal effects
  - Musculoskeletal effects
  - Kidney damage
  - Liver damage
  - Neurological effects
  - Hormonal effects
  - Prenatal effects
  - Other health effects
  - Mental health effects
  - Death
- Withdrawal
  - Causes
  - Timeframe (i.e., peaks of withdrawal symptoms)
  - Physical signs (e.g., nausea, diarrhea, vomiting, cold flashes)

Process/Skill Questions

- What are the short- and long-term effects of withdrawal dependence symptoms?
- How long can the human body function while exhibiting the symptoms of withdrawal?
- What are other medical conditions that may arise because of the symptoms of physical dependence?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Teamwork Events

- HOSA Bowl

Task Number 104
Explain the use of opioids in practice settings, the role of opioids in pain management, and risk factors associated with the use of the medication.

**Definition**

Explanation should include

- appropriate use of different opioids in various practice settings
- the interactions, risks, and intolerance of prescription opioids
- the role and effectiveness of opioids in acute, sub-acute, and chronic pain
- a reassessment of opioid use based on stage of pain
- contemporary treatment guidelines, best practices, health policies, and government regulations related to opioid use
- use of opioids in pain management of patients with substance abuse disorders, in recovery, and in palliative/end-of-life care.

**Process/Skill Questions**

- When should risk factors regarding opioids be reviewed with the patient?
- What are the options when treating patients with a history of substance abuse?
- What government regulations and policies are in place to improve the safe administration of opioids?

**HOSA Competitive Events (High School)**

**Health Science Events**

- Medical Spelling
- Medical Terminology
- Knowledge Test: Pharmacology

**Teamwork Events**

- Creative Problem Solving
- HOSA Bowl

**Task Number 105**

Describe the withdrawal and tapering side effects of opioid use.
Definition

Description should include

- characteristics of acute and protracted withdrawal from opioid dependence or addiction
- tapering
- pain contracts or agreements.

Process/Skill Questions

- What are the stages of withdrawal in opioid abuse transition?
- What medications might be needed in the withdrawal stage?
- What information should be included in the pain management contract?

HOSA Competitive Events (High School)

Health Science Events

- Knowledge Test: Pharmacology

Health Professions Events

- Clinical Nursing

Task Number 106

Describe storage and disposal options for opioids.

Definition

Description should include

- medicine take-back options (e.g., National Drug Take Back Day)
- disposal in the household trash and flushing certain potentially dangerous medicines down the toilet.

Resources:

- Disposal of Unused Medicines: What You Should Know, Food and Drug Administration (FDA)
- Prescription Drug Abuse and Tips for Proper Disposal, Office of the Attorney General of Virginia
Process/Skill Questions

- How should medications be stored in the house?
- What is National Prescription Drug Take Back Initiative?
- What is the black box?

HOSA Competitive Events (High School)

Health Science Events

- Knowledge Test: Pharmacology

Health Professions Events

- Clinical Nursing

Task Number 107

Explain community resources for education about opioid use.

Definition

Explanation should include key components of and resources for patient education in the use of opioids, including

- risks
- benefits
- side effects
- tolerance
- signs of sedation or overdose
- naloxone, including its storage and disposal.

Process/Skill Questions

- What resources for opioid education are available locally, statewide, and nationally?
- Where should the patient first be informed about the resources available?
- How does social media aid in patient education on opioid addiction?

HOSA Competitive Events (High School)

Health Science Events
Working with Patients and Caregivers

Task Number 108

Describe key communication topics involving opioids for patients.

Definition

Description should include

- benefits and risks of opioids
- opioid risk screening (i.e., taking a social, medical, and financial history)
- risk mitigation (e.g., naloxone, safe storage, pain contracts)
- medication tapers and/or discontinuation of therapy.

Process/Skill Questions

- What are the benefits of using opioids in medicine?
- What is the relationship between demographics and risk of opioid addiction?
- How does culture influence risk factors in opioid abuse?

HOSA Competitive Events (High School)

Health Science Events

- Medical Spelling
- Medical Terminology

Health Professions Events

- Clinical Nursing
Task Number 109

Describe communication topics for caregivers and family members.

Definition

Description should include

- basic knowledge about opioids
- signs of addiction
- treatment options for addiction
- naloxone training for caregivers
- legal issues related to misuse.

Process/Skill Questions

- What rights do caregivers have in regard to medical information of the abuser?
- What legal steps might the caregiver or family have to take for treatment?
- Where can the caregiver or family members receive naloxone training? Are children of opioid abusers eligible for training?

HOSA Competitive Events (High School)

SOL Correlation by Task

| Identify Occupational Safety and Health Administration (OSHA) regulations and guidelines. | English: 11.5, 12.5 |
| Demonstrate appropriate hand-hygiene techniques. | History and Social Science: GOVT.14 |
|Demonstrate how to clean instruments and supplies. | |
|Demonstrate isolation procedures to include personal protective equipment (PPE) as it applies to the Centers for Disease Control and Prevention (CDC) regulations on disease processes. | |
|Demonstrate double-bagging technique. | |
|Demonstrate the handling and disposal of contaminated material. | |
|Demonstrate medical asepsis. | |
|Demonstrate surgical aseptic techniques. | |
|Demonstrate assessment procedures as outlined in the Board of Nursing Regulations in a laboratory and/or clinical setting. | |
|Demonstrate measuring and recording intake and output in a laboratory and/or clinical setting. | |
|Demonstrate alternate feeding methods and techniques in a laboratory and/or clinical setting. | |
|Demonstrate appropriate body mechanics in a laboratory and/or clinical setting. | |
|Explain procedures and law regarding use of mobility equipment in a laboratory and/or clinical setting. | English: 11.5, 11.8, 12.5, 12.8 |
|Maintain a safe and controlled environment within laboratory and clinical environments. | |
|Identify prevention of, and appropriate response to, situations of domestic violence within laboratory and clinical environments. | English: 11.5, 12.5 |
|Perform procedures related to American Heart Association (AHA) first aid and emergency care in a laboratory and/or clinical setting. | History and Social Science: GOVT.1 |
|Identify environmental safety precautions and procedures within laboratory and clinical environments. | English: 11.5, 12.5 |
|Demonstrate range of motion in a laboratory and/or clinical setting. | |
|Explain the admission, transfer, and discharge procedures of a clinical setting. | English: 11.5, 12.5 |
|Perform procedures related to personal hygiene and activities of daily living (ADL). | |
|Explain the role of fluids in maintaining homeostasis. | English: 11.3, 11.5, 12.3, 12.5 |

Appendix: Credentials, Course Sequences, and Career Cluster Information

Industry Credentials: Only apply to 36-week courses

- EKG Technician Certification (ETC) Examination
- Practical Nursing Assessment

Concentration sequences: A combination of this course and those below, equivalent to two 36-week courses, is a concentration sequence. Students wishing to complete a specialization may take additional courses based on their career pathways. A program completer is a student who has met the requirements for a CTE concentration sequence and all other requirements for high school graduation or an approved alternative education program.

- Introduction to Health and Medical Sciences (8302/36 weeks)
- Introduction to Health and Medical Sciences (8301/18 weeks)
- Practical Nursing I (8357/18 weeks, 280 hours)
- Practical Nursing III (8359/36 weeks, 420 hours)

Career Cluster: Health Science
